WECS II 512/1024 webserver-Extension

The new WECS II 512 / 1024 Webserver extension is a software to extend the WECS II 512/DMX/02 and WECS II 1024/DMX/02 controller properties. By installing the software, you will receive an integrated Web server on the WECS control unit. This enables an optimum remote control of your WECS via the Internet around the clock or via the local wireless network.*

You have an overview of all inputs and outputs, the Scheduler, the shows, the files on the SD card and the RDM participants and their properties (monitoring). You have access to all basic parameters of RDM and can identify addresses and change them. The shows or sequences of a project stored on the micro SD card can be read, exchanged or even supplemented.

*Wireless router is not included in
the standard scope of delivery.

Product characteristics at a glance
- Integrated webserver for DMX/RDM Controller
- Easy direct access and report of all controllable products
