

# Typical pond problems – our solutions

The OASE AquaActiv product range offers the right solution for virtually any problem that can occur in caring for a pond. Developed by experts and precisely matched, with our preparations and extracts you are on the safe side in every situation.

The overview shows which product can be considered for which problem. More details are provided in the product description and in the user instructions.

## SEDI FREE

### *Effective against pond silt*

- Contains high-performance bacteria for decomposition of organic silt deposits
- 2-component system with active oxygen granulate accelerates decomposition of silt
- Focussed prevention of silt formation and long-term turbidity

Dead algae, leaves or plant remains accumulate and layers of silt form particularly in areas of the garden pond where water flow is weak. They can cause decomposition and unpleasant odours. In addition to regular cleaning of the pond with the sludge vacuum, you can gently remove and prevent deposits with SediFree. The active oxygen granulate sinks deep into the layer of silt and oxidises it. Thus, the microorganisms that are specialised in decomposing organic material can completely perform their work. For fast effect we recommend use in a water temperature of 10 °C.

## OXYPLUS

*Increases the oxygen content*

- Long-lasting controlled-release effect
- Fast solution for lack of oxygen e.g. if there is algal bloom
- Prevents formation of hazardous fermentation gas
- Supports the biological self-cleaning properties

Warm temperatures, paired with strong decomposition processes or algae growth quickly result in lack of oxygen. This can become a serious hazard for pond inhabitants, particularly in the early morning hours. Fish that increasingly stay near the surface of the water and are gasping for air are an indicator. OxyPlus Increases the oxygen content quickly and without complications. And it even does it over several days thanks to the controlled-release effect. This also promotes the self-cleaning effect of the pond. The guarantor for crystal clear and healthy pond water. OxyPlus is the ideal supplement for treating silt or algae.

## POND CLEAR

*Creates crystal clear water*

- Removes minerals and the remains of organic substances that cause turbidity
- Effective against fine, non-filterable pollutants
- Helps remove phosphates and heavy-metal compounds

In spite of filter technology, the finest, non-filterable pollutants can cause turbidity. With PondClear mineral particles from decaying organic material are flocculated. Then the flocculation can be scooped out with the net or removed via the filter system. In this process toxic heavy metal and phosphates are also removed. For safe application the carbonate hardness must be at least 3°dKH. A suitable quick test is included in the scope of delivery. Not suitable for sturgeon stock. PondClear is not approved for algae control. Consequently, for green ponds we recommend AlGo Greenaway.\*

\*Use biocides carefully.  
Always read the label and product information before use!
